Subject Code:22CSP-351

Problem-1: Convert Sorted Array to Binary Search Tree

Given an integer array nums where the elements are sorted in ascending order, convert it to a height-balanced binary search tree.

Example 1:

Input: nums = [-10,-3,0,5,9]

Output: [0,-3,9,-10,null,5]

Explanation: [0,-10,5,null,-3,null,9] is also accepted:

Example 2:

Input: nums = [1,3]

Output: [3,1]

Explanation: [1,null,3] and [3,1] are both height-balanced BSTs.

Constraints:

- $1 \leq \text{nums.length} \leq 10^4$
- $-10^4 \leq \text{nums}[i] \leq 10^4$
- nums is sorted in a **strictly increasing** order.

</> Code

C++ v Auto

```
3  * struct TreeNode {
4      *     int val;
5      *     TreeNode *left;
6      *     TreeNode *right;
7      *     TreeNode() : val(0), left(nullptr), right(nullptr) {}
8      *     TreeNode(int x) : val(x), left(nullptr), right(nullptr) {}
9      *     TreeNode(int x, TreeNode *left, TreeNode *right) : val(x), left(left), right(right)
10     {}
11     * };
12     */
13     class Solution {
14     public:
15         TreeNode* sortedArrayToBST(vector<int>& nums) {
16             return helper(nums, 0, nums.size() - 1);
17         }
18     private:
19         TreeNode* helper(vector<int>& nums, int left, int right) {
20             if (left > right) return nullptr;
21             int mid = left + (right - left) / 2;
22             TreeNode* root = new TreeNode(nums[mid]);
23             root->left = helper(nums, left, mid - 1);
24             root->right = helper(nums, mid + 1, right);
25             return root;
26         }
27     };

```

Case 1

Case 2

Input

```
nums =
[-10,-3,0,5,9]
```

Output

```
[0,-10,5,null,-3,null,9]
```

Expected

```
[0,-3,9,-10,null,5]
```

Problem-2: Maximum Depth of Binary Tree

Given the root of a binary tree, return *its maximum depth*.

A binary tree's **maximum depth** is the number of nodes along the longest path from the root node down to the farthest leaf node.

Example 1:

Input: root = [3,9,20,null,null,15,7]

Output: 3

Example 2:

Input: root = [1,null,2]

Output: 2

Constraints:

- The number of nodes in the tree is in the range $[0, 10^4]$.
- $-100 \leq \text{Node.val} \leq 100$

```
